IN OUR 8th YEAR

WORM FARM WASTE SYSTEMS

Process sewerage, garbage and waste waters into an aerated, odour free liquid that waters your garden from below, just like on the forest floor

– naturally!

No Smells!

“I am so delighted with my Worm Farm Waste System! We had a traditional septic system and as it was in the front of the house every visitor had to endure the smelly septic. In the end the sand became so clogged with organics that sewerage was seeping into the street. We turned our septic into a Worm Farm Waste System and within two weeks you would not believe the difference – there were NO SMELLS. I am also using the processed water to water our garden and natural bush land area.

I am so delighted that the installation did not destroy my bush garden and we now have an odour-free Worm Farm Waste System.”

Greg Holding,
Arthur's Seat Victoria.

Forget smelly septics or expensive chemical treatments with our successful combination of worm systems and new technology.

A&A Worm Farm Waste Systems are a natural way to process garbage, sewerage, household waste water, paper, cardboard, and vegetation (even weeds) into a clear, aerated, odour-free liquid by using worm activity to consume the waste. The worm farm acts as a filter. Eventually the castings find their way into your soil with naturally occurring organisms opening up and improving the soil. It is a process that occurs on the rainforest floor, naturally.

A household solution:

Series PT1800L

Worm Farm Waste System PT1800L is a system of 2500 to 3000 litre tank to AS1546 processing 1800 litres per day. Suitable for up to a 6 bedroom house.

- ◆ As all Worm Farm Waste Systems do not store liquid, land with a high water table should use either of our concrete tank models, CT3600L or CT4500L.
- ◆ All pump systems are supplied with an alarm system.
- ◆ All plumbing in the house is standard.
- ◆ This system used on a sloping site can take liquids out by gravity to an approved disposal area.
- ◆ On a flat site, a small sump pump is added to move liquid to the approved disposal area.
- ◆ Take responsibility for your waste and have your soil, garden, lawn or bush land benefit.
- ◆ Low cost.
- ◆ Low maintenance.
